

Can you support collaboration?

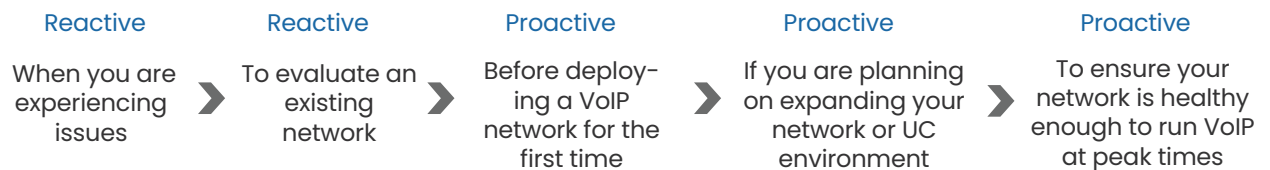

Ensure your Local and Wide Area Network (LAN/WAN) infrastructure is optimized and ready for unified communications with the iQSG voice assessment.

Voice over IP is a mainstay; however, many companies still have digital and analog voice systems and wish to protect that investment while growing into IP voice services.

Additionally, If you have made the transition to Voice over IP but it isn't performing well, an assessment will detect why, where and what to perform to ensure reliable communications.

When to assess?

iQSG's Voice Readiness Assessment ensures your initiative yields productivity enhancements, performance improvements, mitigates risk and effectively compliment your change control methodology.

The assessment will consider all aspects of your corporate voice environment – simulating voice traffic over your existing network offering the assurance that your network is designed and prepared.

Receive verification and sustainability of solid and concrete deliverables:

Architecture / Design
LAN / WAN
Networked Applications
Application flows
Traffic flows
Bandwidth utilization
Network Access
User community
Host / End-User utilization
Management / Admin Tools
Technology Scores (MOS)

Tailored solutions and custom approaches.
